

Sai Krishna K M

SOC Analyst

✉ saikrish172003@gmail.com ☎ +91 9141428452 🌐 Sai Krishna 🔄 Sai Krishna

Profile

Aspiring Cybersecurity network security monitoring, anomaly detection, and DNS traffic analysis. Skilled in identifying suspicious activities and potential threats using tools. Threat Detection, and Cybersecurity Analysis through continuous learning and practical implementation.

Education

M.Tech in Cyber Security REVA Academy for Corporate Excellence REVA University, Bengaluru	Nov 2025 – Nov 2027
B.Tech in AIML New Horizon college, Bengaluru CGPA-8.7	Jan 2023 – May 2025

Skills

Tools

Nmap, Wireshark, John the ripper, Shodan, sub finder, Netdiscover, Splunk , Dirb, Nessus, Hydra, Wazuh.

Soft Skills

Leadership Qualities, Communication Skills, Teamwork, Creative Thinking, Team management.

Work Experience

Hindustan Aeronautics Limited (HAL) - Analyzed flight control and sensor data for system performance evaluation and stability analysis. - Assisted in preprocessing, cleaning, and validation of aerospace datasets. - Contributed to improving control system reliability through data-driven insights. - Gained hands-on exposure to avionics systems and flight control architectures.	Feb 2025 – May 2025
--	---------------------

Projects

The AI Automation & Log Analysis Assistant

- Intelligent cybersecurity system that automates log monitoring and threat detection.
- It uses AI techniques, and rule-based analysis to identify cyber attacks .
- The project provides a web dashboard, AI chatbot, automated alerts, and security report generation.
- It helps security analysts reduce manual effort and improve threat detection efficiency.

Network Anomaly Detection for Cyber Threat Identification Using Artificial Intelligence

- Developed an AI-based Network Anomaly Detection System to identify suspicious network activity.
- Captured and analyze real-time network traffic using Wireshark.
- Extracted statistical features from packet data for behavioral analysis.
- Implemented K-Means Clustering to group normal and abnormal traffic patterns.
- Applied Isolation Forest algorithm to detect anomalies without labeled datasets (unsupervised learning).
- Identified unusual connections, traffic spikes, and protocol misuse patterns.

AI-Powered Threat Intelligence Feed Aggregator

- Developed an AI-based Threat Intelligence Feed Aggregator to collect and analyze cyber threat data from RSS feeds, GitHub, and security blogs.

- Implemented automated IOC extraction for IP addresses, URLs, and file hashes using Python and regex techniques.
- Integrated LLM-based threat summarization using Ollama models to generate concise security insights for SOC analysts.
- Designed an interactive Gradio dashboard for real-time monitoring, searching, and analysis of threat intelligence feeds.

DNS Traffic Monitoring & Suspicious Domain Detection Using Wireshark

- Implemented a DNS Traffic Monitoring & Suspicious Domain Detection project using Wireshark.
- Captured live network traffic and filtered DNS queries for analysis.
- Analyzed request patterns, abnormal query frequencies, and unknown domain behaviors.
- Detected potential phishing domains, DNS tunneling, and command-and-control (C2) communication attempts.

Online Courier Management System

- Developed a full-stack Online Courier Management System to automate parcel booking, tracking, billing, and delivery management operations.
- Implemented role-based access for Admin, Staff, and Customers with secure authentication and database-driven workflows.
- Built real-time shipment tracking and automated reporting features using PHP, MySQL, HTML, CSS, and JavaScript.
- Improved logistics efficiency by digitizing courier processes and providing a user-friendly web-based interface.

Certificates

- Cisco Introduction to Cybersecurity -CISCO
- Cisco Networking Academy program - CISCO
- Cyber Threat Management - CISCO
- Junior Cybersecurity Analyst - CISCO
- Cybersecurity Defense Analyst - CISCO
- Python 101 For Data Science -IBM
- SQL and Relational Database 101 -IBM
